AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (Previously Presented) An interception device comprising a Session Initiation Protocol proxy server or a Media Gateway Controller to detect information in signaling information being transmitted between two Internet Protocol parties and to generate instructions out of the detected signaling information for instructing a Real-time Transport Protocol proxy server to create channels to bypass a media stream to be intercepted via an intermediate storage medium.

2. (Previously Presented) A Session Initiation Protocol interception proxy server to detect information in the signaling information being transmitted between two Internet Protocol parties and to generate instructions out of the detected signaling information for instructing a Real-time Transport Protocol proxy server to create channels to bypass a media stream to be intercepted via an intermediate storage medium.

3. (Previously Presented) An Interception Media Gateway Controller to detect information in the signaling information being transmitted between two Internet Protocol parties and to generate instructions out of the detected signaling information for instructing a Real-time Transport Protocol proxy server to create channels to bypass a media stream to be intercepted via an intermediate storage medium.

4. - 7. (canceled).

8. (Previously Presented) An intercept system for intercepting a first data stream

transmitted between a first Internet Protocol (IP) addresses and a second IP address, the intercept

device comprising:

a first server detecting information in the first data stream and generating an instruction

based on said information;

a second server creating a channel based on said generated instruction,

wherein said channel bypasses said first data stream through a storage device, and said

storage device operates to store a copy of said first data stream.

9. (Previously Presented) The intercept system according to claim 8, wherein the first

server is one of a Session Initiated Protocol proxy server and a Media Gateway Controller.

10. (Previously Presented) The intercept system according to claim 8, wherein the

second server is a Real-time Transport Protocol proxy server.

11. (Previously Presented) The intercept system according to claim 8, wherein said

second server further creating a second channel based on said generated instruction, wherein said

second channel bypasses a second data stream, transmitted in the opposite direction as the first

data stream, through the storage device, and said storage device operates to store a copy of said

second data stream.
